components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and antagonists of antagonists and antagonists and antagonists of the treatment and prevention of diseases including bacterial infection, otitis media in infants and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     M. catarrhalis BASB019 protein sequence #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY55089;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY55089 standard; Protein; 172 AA
                                                                                                 This sequence is a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for

They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the normal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are resistant to standard antibiotics. The BASBO19 products of the invention can be used screen for new antibacterial compounds that may target these

The sequences can be used for diagnosis of disease, staging of CC disease, or determining response of an infectious organism to drugs. The CC disease, or determining response of an infectious organism to drugs. The CC polynucleotides may be used as a source for hybridisation probes, and for CC components of genetic mutations, serotype, organism or strain CC components of arrays which are useful for diagnostic and prognostic CC purposes. The polypeptides can be used to produce antibodies, and as CC also be used in vaccine formulations, and to identify agonists and CC also be used in vaccine formulations, and to identify agonists and CC (which are bacteristatic) are used for the treatment and prevention of CC diseases including bacterial infection, otitis media in infants and CC invasive diseases, chronic otitis media with hearing loss, fluid CC accumulation in the elderly, sinusitis, noscomial infections and CC learning, infection of the upper respiratory tract and middle ear CC infection. They are also used in the prevention of adhesion of bacteria CC control of infections on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the implantation of pathogenesis in infections initiated other than by the implantation of pathogenesis in infections has risen dramatically, can be used screen for new antibacterial compounds that may target these CC resistant to standard antibiotics. The BASBO19 products of the invention CC can be used screen for new antibacterial compounds that may target these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 171;

This sequence is a Moraxella catarrhalis BASBO19 protein of the CC invention. The sequences can be used for diagnosis of disease, staging of components or determining response of an infectious organism to drugs. The CC polynucleotides may be used as a source for hybridisation probes, and for cidentification, identification of mutation in BASBO13 sequences, and as components of arrays which are useful for diagnostic and prognostic CC purposes. The polypeptides can be used to produce antibodies, and as a cc also be used in vaccine formulations, and to identify agonists and CC also be used in vaccine formulations, and to identify agonists and cc diseases including bacterial infection, oticis media in infants and CC diseases including bacterial infection, oticis media in infants and cc invasive diseases, chronic otits media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech CC infection. They are also used in the prevention of adhesion of bacteria cc infections on in-dwelling devices, or to extracellular cc proteins on wounds, and to thus prevent tissue damage and/or block the companiency of Moraxella catarrhalis infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections initiated other than by crast that to standard antibiotics. The BASBO19 products of the invention of these used screen for new antibacterial compounds that may threet these
Sequence
                                                    can be used screen for new antibacterial compounds that may target
                                               resistant bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; Fig 3; 101pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  catarrhalis used to prepare vaccines against bacterial infections

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and antagonists and arrays are used for the treatment and prevention of diseases including bacterial infection, otitis media in infants and children, pneumonia in the elderly, sinusitis, nosocomial infections and invasive diseases, chronic otitis media with hearing loss, fluid invasive diseases, chronic otitis media with hearing loss, fluid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    03-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             accumulation in the middle ear, auditive nerve damage, delayed speech learning, infection of the upper respiratory tract and middle ear infection. They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the normal progression of pathogeness in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are resistant to standard antibiotics. The BASBO19 products of the invention can be used screen for new antibacterial compounds that may target these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-MAY-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W09957277-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynicleotides may be used as a source for hybridisation probes, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel BASB019 polynucleotides and polypeptides from Moraxella catarrhalis used to prepare vaccines against bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB; AAZ40354.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               An epitope of this protein is recognised by the 7F3 antibody in a number of isolates. Monoclonal antibodies to the 16600 D OMP are produced by hybridomas and used to detect H.influenzae. A suspect sample is contacted with the MAb in the presence of an indicator

                                       The PBOMP proteins were isolated from a PBOMP-enriched insoluble cell wall fraction from physically disrupted cells of H. influenzae and then solubilising the PBOMP from the cell wall fraction by heating in the presence of a detergent or digesting the cell wall fraction with lysozyme, opt. in the presence of a detergent. The genes encoding the PBOMP proteins were isolated by screening a DNA library with an oligonucleotide probe based on the amino acid sequence of the PBOMP protein, or using antibodies to PBOMP.

Monoclonal antibodies to the 16600 D OMP are produced by hybridomas and used to detect H.influenzae. A suspect sample is contacted with the MAb in the presence of an indicator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PBOMP-1 gene product

                                                                                                                                                                                                                                                                                                                                                                                                                                  The P6 outer membrane protein (OMP) is conserved among strains of Haemophilus influenzas and so antibodies to the OMP can be used to identify H. influenzas in clinical samples. The OMP can also be used in the development of vaccines against H. influenzas which causes pneumonia, bacteraemia, meningitis, postpartum sepsis and acute febrile tracheobronchitis in adults and neonatal sepsis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Haemophilus

The protein may be used in a vaccine to prevent or treat H. pylori
C infection or to identify H. pylori polypeptide binding compounds,
U useful as potential H. pylori life cycle activators or inhibitors.
C werlapping contigs generated by mechanically shearing the bacterial
C DNA. The sequences were analysed for ORF of at least 180 nucleotides,
and the predicted coding regions defined by computer evaluation. To
C dentify likely H. pylori antigens for vaccine development, the amino
acid sequences predicted from various ORF were analysed for significant
homology to other known or exported membrane proteins. Having identified
and determined the sequences of interest, particular regions can be
isolated from H. pylori by PCR amplification for recombinant polypeptide
production, e.g. in E. coli hosts.
                                                                                                                                                                                                                                                                                                                                        Query Match

Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. pylori whole genomic DNA was isolated and nebulised to a median size of BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary to the BstXI-cut pMPX vectors, while the overhang is not will the cut vector re-ligate itself easily. The linker-adapter inserts were ligated to each of the 20 pMPX vectors to construct a series of shotgum subclone libraries. The purified DNA samples were then
                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              are used to evaluate compounds, especially activators or inhibitors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents an H. pylori outer membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 18; Page 171; 235pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Helicobacter pylori nucleic acid sequences and related proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; AAT77469.

                                                                                                                                                                                                                                                                                                                                                                                                                                                     antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antigen; immunogenic cluster family; vaccine; gastritis; diagnosis; peptic ulcer; gastric adenocarcinoma; gastric lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Expressed antigen for clone Y175A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-FEB-1999 (first entry)

C The protein may be used in a vaccine to prevent or treat H. pylori confection or to identify H. pylori polypeptide binding compounds, cusful as potential H. pylori life cycle activators or inhibitors. C overlapping contigs generated by mechanically shearing the bacterial control of the predicted coding regions defined by computer evaluation. To condity likely H. pylori antigens for vaccine development, the amino call sequences predicted from various oRF were analysed for significant cand determined the sequences of interest, particular regions can be considered from H. pylori by PCR amplification for recombinant polypeptide yr

The proteins are highly immunogenic and induce a long-lasting antised that persists even after antimicriobial treatment. In highly sensitive and specific. The specification also describes 69 are used to detect H. pylori-specific cluster families. H. pylori antigens infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This amino acid sequence of Omp22, is a recombinant outer membrane protein which is identical to the mature protein of its native form (see AAW23592). It retains antigenicity and immunogenicity against Helicobacter pylori. This recombinant Omp22 protein can be mass produced in via expression in E.coli DH5-Alpha cells. H. pylori is associated with inflammation of the stomach and gastritis related diseases e.g. with inflammation of the stomach and gastritis related diseases e.g. peptic ulcers and gastric cancer. The native and the recombinant form of Comp22 could be used in immunological therapy as a H. Pylori-specific antigen for the treatment and prevention of diseases associated with this microorganism e.g. as the active ingredient in a diagnostic kit or a prophylactic/therapeutic vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gastritis; peptic ulcers; gastric cancer; diagnostic; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Helicobacter pylori.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           recombinant protein.

                                                                                                                                                                                                                                                                                                                                                                                    AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitts and is thought to be a contributing factor in heart nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in nucleotides sequences can also be used as immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                           Sequence

```
The present sequence is Chlamydia pneumoniae outer membrane protein (omp) P6 precursor. The omp P6 precursor polynucleotide, corpolypeptide and its antibody are useful for detecting, preventing and cut treating Chlamydia infections e.g. pneumonia, upper respiratory tract coresponding to the construction of the consociated with atherosclerosis and asthma. Immunogenic fragments corporated with atherosclerosis and asthma. Immunogenic fragments of the associated with atherosclerosis and asthma. Immunogenic fragments corporated corposition. The polynucleotide is useful in the construction of attenuated Chlamydia strains that can over express the polynucleotide or express it in a non-toxic, mutated form. The omp P6 probes are useful in diagnostic tests as capture or detection probes and the primers are cuseful in diagnostic methods involving PCR (polymerase chain reaction).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 also involved in the development of cardiovascular diseases such as atherosclerosis, coronary artery disease, carotid artery stenosis, anyocardial infarction, cerebrovascular disease, carotid artery stenosis, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of Chlamydia pneumoniae, and the nucleic acids may be used in pcR, branched DNA probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a specifically claimed Chlamydia pneumoniae protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is pneumoniae is a common cause of respiratory disease in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia pneumoniae, and for diagnostic purposes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 60; 364pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ratti G,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (CHIR-) CHIRON SPA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-OCT-1997;

                                                                                                                                                                                                                                                                                                                                                         Moraxella catarrhalis BASB113 protein.
                                                                                                                                                                                                                                                                                                                                                                                        23-APR-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

Also claimed is a vaccine composition comprising a BASBII3 polypeptide, or a polypeptide having at least polynucleotide encoding such a polypeptide. A claimed method of diagnosing a Moraxella infection involves identifying a BASBII3 polypeptide. A claimed method of polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection composition useful antibody directed against a BASBII3 polypeptide. BASBII3 and in screening for antibacterial drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MOMP P5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB47447;

One or more surface exposed loops of this protein may be replaced with a modified peptide of the invention. Each of these peptides contain an LB1(f) peptide which is a 19 amino acid peptide derived from the sequence of MOMP P5 from strain ntHill28, representing amino acids Argll7 to Gly135. This peptide represents the third exposed loop of P5 and is a potential B cell epitope. The loops of the invention are modified in terms of being in a non-native of the invention are modified in terms of being in a non-native

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein was expressed in Escherichia coli and Saccharomyces cerevisiae transformants. The oprF-oprI hybrid protein, and antibodies raised against it, conferred protection against p. acruginosa infection in laboratory animals. The hybrid protein was significantly more immunogenic than an oprI-oprF fusion (AAR99627).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A cDNA sequence (AAT32600) codes for a fusion (AAR99626) between amino acids 192-342 of the outer membrane protein F (oprF) and amino acids 21-83 of outer membrane protein I (oprI) of Pseudomonas aeruginosa ATCC 33354. A glutathione-S-transferase fusion with the hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 13-14; 23pp; English.

P5 (or its peptide fragments) are used in vaccines for prevention of H. influenzae infections implicated in otitis media, sinusitis and chronic pulmonary obstructive disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                          A cDNA sequence (AAT32599) codes for the C-terminal region, amino acids 190-350 (AAR99625), of the Pseudomonas aeruginosa ATCC 33354 outer membrane protein F (oprF). A hybrid protein between glutathione-S-transferase and the oprF moiety was expressed in Escherichia coli. oprF-oprI (AAR99626) and OprI-oprF (AAR99627) fusion proteins were also prepd. and tested for their efficacy as vaccines
 Sequence
                       proteins were also prepd. and te against P. aeruginosa infection.
                                                                                                                                      Disclosure; Page 11-12; 23pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Campylobacter coli fibronectin binding protein (CddF). A recombinant expression vector with cadf is useful in an assay for determining the presence of C.jejuni or C.coli in a test sample or for determining whether a test isolate of Campylobacter is a strain of C.coli cadf is useful in the construction of DNA probes for identifying and quantifying the level of expression of Cadf in a cell. The gene can also be used in a vaccine.

antibody; glutathione-S-transferase; GST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             P. aeruginosa orpI-oprF fusion protein.
                                                                        A cDNA sequence (AAT34419) codes for a fusion (AAR99627) between amino acids 21-83 of the outer membrane protein I (oprI) and C-terminal amino acids 190-350 of outer membrane protein F (oprF) of Pseudomonas aeruginosa AFCC 3354, the 2 moieties being joined by a linker dipeptide. A glutathione-S-transferase fusion with the hybrid protein was expressed in Escherichia coll and Saccharomyces cerevislae transformants. The oprI-oprF hybrid protein was significantly less immunogenic than an oprF-oprI fusion (AAR99627).
                                                                                                                                                                                                                                                                                                                                                                                                                                                              EP717106-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein
                                                                                                                                                                                                                                                                                                                                                                                                          17-NOV-1995;

                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                 The protein is isolated from the OMP of P. aeruginosa serotype 6 ATTC 33354) and purified by HPLC. The amino-terminal and trypsin fragments are sequenced and a series of oligonucleotide probes constructed corresponding to the established sequences. These probes are used to screen a gene bank of 15-20 kb fragments of genomic DNA in lambda EMBL 3. One positive clone includes a 15 kb insert contg. the protein gene, which can be isolated as a 2.5 kb PstI fragment. This fragment cannot be cloned int a high copy no. vector because of the toxicity of the gene prod.., so is subcloned as two fragments with an overlapping region of about 500bp. Ab's are raised by usual immunisation or cell-fusion procedures. The Ab's are useful in diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAP82053 standard; protein; 350 AA.

                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                              determining whether a test isolate of Campylobacter is a strain of C.coli. cadf is useful in the construction of DNA probes for identifying and quantifying the level of expression of Cadf in a cell. The gene can also be used in a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a Campylobacter jejuni or Campylobacter coli fibronectin binding protein (CadF). A recombinant expression vector with cadF is useful in an assay for determining the presence of C.jejuni or C.coli in a test sample or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated polynucleotide useful for producing fibronectin binding proteins which are useful in production of vaccine, in diagnostic assays and for prophylactic and therapeutic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Column 37-40; 29pp; English.

The invention relates to the novel APP outer peach of the proteins Omp20, OmpW, Omp27, OmpA1 and OmpA2 (AAY97896-Y97900) and to nucleic acids encoding them (AAA38554-A38558). APP is a Gram negative coccobacillus which is one of the most important swine pneumonic pathogens. 12 different serotypes of APP have been recognised which vary in geographic distribution. Prior art attempts at vaccinating artists the property of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           against App have produced mainly serotype-specific immune responses. In contrast, natural immunity to any one serotype seems to confer significant protection from disease caused by other serotypes, suggesting that natural exposure induces cross-reactive immunity to shared antiqens. The novel outer membrane proteins of the invention are present in all 12 serotypes, and may provide a target for cross-protective immunisation. The novel outer membrane proteins and nucleic acids encoding them can be used as a vaccine against App in swine. They can also be used as reagents for the diagnosis of App infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Actinobacillus pleuropneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Attenuated Pasteurellaceae bacteria comprising mutations in virulence genes, useful as a live attenuated vaccine against bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   06-APR-2000; 2000WO-US09218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence gene. The virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and bacterial infections such as septicemias, bronchopneumonias, rhinitis and

Fimbrin protein is produced by culturing a transformed microbial host, pref. E.ocli, Sporodoptera frugiperda or a mucosal pathogen. Fimbrin protein (FP) produced by this process is claimed. The FP protein migrates in polyacrylamide genes to a posn. equiv. to a mool. wt. of 25.5 kD or 37.5 kD.
                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                               The fimbrin proteins from 15 randomly selected type b and non-typable clinical isolates of Haemophilus influenzae share common

These can be used to produce vaccines which protect against M. catarrhalis infection, which can cause otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a protein of the invention.

The present sequence is that of the HagA haemagglutinin of Haemophilus paragallinarum strain 2403 (serovar A), the causative agent of infectious coryza in chickens. The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and recombinant haemagglutinin polypeptides (see AAM50716-27) and coryza of chickens. The polypeptides are useful in vaccines for coryza of chickens. The polypeptides are useful in vaccines for memunisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or Mycoplasma (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or derivative, that is capable of eliciting an immune response, in reviding an immune response.

                                                                                                                                                 The present sequence is that of the HagA haemagglutinin of CC agent of infectious coryza in chickens. The invention provides CC agent of infectious coryza in chickens. The invention provides CC encoding nucleic acids (see ABA91417-27) from 11 strains (serovars CC a, B and C) of H. paragallinarum, the causative agent of infectious CC immunisation against infectious coryza, as are the nucleic acids CC when expressed in attenuated bacteria, especially Salmonella or CC when expressed in attenuated bacteria, especially Salmonella or CC the mature protein, or a biologically active fragment, variant or CC derivative, that is capable of eliciting an immune response, derivative, that is capable of eliciting an immune response, coryza paragallinarum in chickens. Also claimed are methods of using the CC paragallinarum in chickens. Also claimed are methods of using the CC diagnosis of infectious coryza in chickens.

The present sequence is that of the HagA haemagglutinin of C Haemaphilus paragallinarum strain 2671 (serovar B), the causative agent of infectious coryza in chickens. The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and CC encoding nucleic acids (see ABA91417-27) from 11 strains (serovars CC encoding nucleic acids (see ABA91417-27) from 11 strains (serovars CC encoding nucleic acids (see ABA91417-27) from 11 strains (serovars CC encoding nucleic acids (see ABA91417-27) from 11 strains (serovars CC encoding nucleic acids (see ABA91417-27) from 12 strains (serovars CC encoding against infectious coryza, as are the nucleic acids (see ABA91417-27) from 13 strains of the mature protein, or a biologically active fragment, variant or CC encoding protection against one or more strains of the providing protection against one or more strains of the CC paragallinarum in chickens. Also claimed are methods of using the CC diagnosis of infectious coryza in chickens
                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -I- SUBCELLULAR LOCATION: Nuclear.
-I- ALTERNATIVE PRODUCTS: 2 isoforms; A/E74A (shown here) and B/E74B
-(AC PIL1536); are produced by alternative splicing.
-I- DEVELOPMENTAL STAGE: In mid instar larvae salivary glands levels are low during puff stage 1 and increase during puff stage 2 to become the predominant form in stage 3. Levels reach maximum in late larvae during puff stages 8-10, decreasing abruptly at stage 11. This expression pattern is also seen in Malpidhian tubules and fat body. Transcripts are detected again in salivary glands from puff stages 12-14 and 17-21.
-INDUCTION: THE EXPRESSION OF THIS PROTEIN IS DEVELOPMENTALLY DECRIFACED.
